Excerpt: . . . Structurally Induced Straightness Effects The two types of electroform orifice plates, pure Ni and bimetallic, would have distinctly different structurally induced straightness characteristics. With a modulus of elasticity approximately half that of steel for both Ni and Be-Cu, the load to strength ratio, W/E , would probably be close to the middle of the range evaluated. Using existing technology, the pure Ni plates would have t/d ratios less than two. A method under development whereby the photoresist pegs can be made much longer than is currently possible would permit plates to be made with t/d ratios of up to approximately 5. In the former case, use of the pure Ni plates would be restricted to single row configurations. In the latter case, up to 4 rows might be possible. For the bimetallic configuration, a t/d ratio...
